

I like the intro web page, add another rectangle titled- Consulting/Advisory Expertise. The next slide would have the three types of services provided with the outline shown below. Then when you click on it it takes you to the full page detailed info.

Senior Living is page 1 and 2

Multi-family is page 3

Reno etc is page 4

The images I have chosen align with each page. I just got permission from Jeff CEO at Moseley to get the hi-res images of my projects to use on the website but that will be a few days from now.

SENIOR LIVING

“I help developers and operators make the right code, accessibility, and licensing decisions early in senior living projects—before they become costly constraints.

My focus is on five key areas:

- During Due Diligence selecting the right code pathway (R-2,R-4,I-1, I-2)
- Aligning construction type and cost strategy
- Integrating licensing requirements from the start
- Coordinating accessibility across multiple standards
- Ensuring the design supports long-term operations and aging-in-place

The goal is simple—reduce redesign, control cost, and preserve flexibility as the project evolves.

MULTI-FAMILY

“I work with developers early in multi-family projects to align code decisions with density, cost, and feasibility—before the design gets locked in.

I focus on five key areas:

- During Due Diligence optimizing construction type, height, and allowable area
- Evaluating podium and mixed-use strategies
- Coordinating accessibility requirements tied to funding
- Identifying opportunities to reduce firewalls and system costs
- Aligning code strategy with budget and schedule expectations

The result is better yield, fewer redesigns, and more predictable outcomes.

RENOVATION, REPOSITIONING & CONVERSIONS

“I help developers evaluate existing buildings—office, residential, or underutilized assets—to determine the most viable path for renovation or conversion before design and capital are committed.

I focus on five key areas:

- During Due Diligence aligning existing construction type with target use
- Using the IEBC to minimize unnecessary upgrades
- Coordinating accessibility across multiple standards
- Evaluating multi-family vs. senior living feasibility
- Identifying life safety and accessibility impacts early
- Aligning the strategy with budget and schedule expectations

The goal is to unlock value, reduce risk, and avoid costly missteps early in the process.
